DIGITISING DOCTOR–PATIENT RELATIONSHIPS BEYOND THE CLINIC

Not just SaaS
Clinic Software + WhatsApp Engagement + Patient App

The Problem

ThinqFit
Consult.Connect.Collabarate

"Healthcare doesn't fail in the clinic. It fails after."

When a patient leaves the clinic, care continuity breaks

- No structured follow-ups
- No adherence tracking
- No ongoing engagement

70–80%

of health outcomes are determined at home

Today's clinic software manages visits — not relationships.

powered by BN

Current Problem

Most clinic SaaS stops at billing and EMR

What's Missing:

- ✗ Long-term care journeys
- ✗ Lifestyle & diet continuity
- ✗ Post-consult nudges
- ✗ Doctor-owned patient retention

Only 2 out of major players have strong patient apps.
Almost none provide white-label, clinic-owned apps.

Our Solution: The 3-Layer Model

ThinqFit
Consult.Connect.Collabarate

1 Clinic SaaS

ADAPTING FROM BN

Adapting to BN CRM - Appointments, EMR, billing, clinic-owned data

2 WhatsApp Engagement

FULLY READY BUILT BLOCK FROM BN

Follow-ups, nudges, adherence tracking

3 Patient App

ADAPTING FROM BN

Adapting BN app - Co-branded OR Doctor-branded app for chronic & long-term patients

We extend care beyond the clinic walls

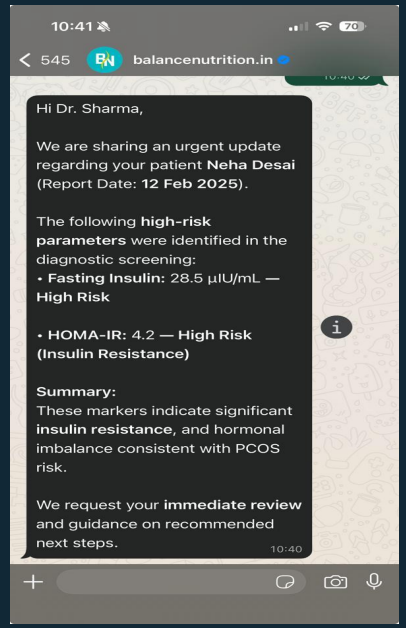
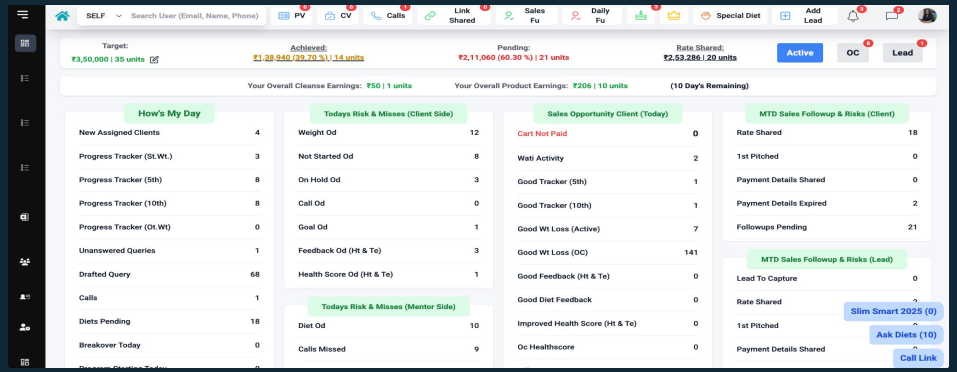
Real-Time Risk Prompts for Doctors & Dietician

Instant prompts on WhatsApp to notify doctors and dietician the moment a health parameter with Moderate to High Risk is detected.

Continuous client progress tracking via the dietician's internal CRM system.





Layer 1 & 2 built is by us at **Balance Nutrition** and it is our moat.

Each of layers can be treated independently.

The Foundation: Multi-Dimensional Health Score

Our comprehensive health assessment system evaluates users across five interconnected markers, each contributing to an overall health score that drives personalized care recommendations.

Weight Marker

Tracks BMI and body weight to calculate ideal weight targets and identify excess weight in kilograms

Diet Marker

Evaluates eating patterns and daily water intake to assess nutritional habits and hydration levels

Medical Marker

Documents existing medical conditions and chronic health issues for comprehensive risk assessment

Health Marker (Symptom Tracking)

Monitors symptoms like acidity, constipation, and other digestive or physical discomforts

Lifestyle Marker

Analyzes sleep quality, alcohol consumption, smoking habits, and stress levels for holistic wellness

Complete Care Pathway Overview

1. **Initial Assessment**
   Five-marker health score calculated
2. **Zone Classification**
   User placed in appropriate risk category
3. **Diagnostics, Doctor and Diet Triage**
   Diagnostics needs determined by zone and additional questions
4. **Results Integration**
   Lab findings update health score
5. **Service Matching**
   Appropriate care services activated

Service Allocation by Health Zone

Diagnostic results and zone classification determine which healthcare services users need, ensuring appropriate care intensity and resource allocation.

Red Zone Services

- Doctor consultation (required)
- Diet services (required)
- Diagnostics (required)
- Ongoing medical monitoring
- Symptom tracking and lifestyle coaching

Orange Zone Services

- Diet services (required)
- Doctor consultation (Conditional)
- Diagnostics (Optional)
- Symptom tracking and lifestyle coaching

Yellow Zone Services

- Diet services (required)
- Doctor consultation (conditional)
- Diagnostics (Optional)
- Symptom tracking and lifestyle coaching

Zone Identification by Clara AI

Users are automatically classified into one of four distinct health zones based on their marker scores, enabling targeted interventions and appropriate care pathways.

Red Zone: Crisis

Critical health status with poor medical markers requiring immediate diagnostic testing and comprehensive intervention – **Medical Marker (Red)**

Orange Zone: Pre-Crisis

Individuals classified as obese or significantly overweight, indicating elevated health risks that need prompt attention – **Weight Marker (Red), Health Marker (Red or Orange)**

Yellow Zone: Watch

Moderately overweight users with noticeable health symptoms requiring monitoring and potential intervention – **Weight Marker (Orange or Yellow), Health Marker (Yellow), Lifestyle Marker (Red or Orange)**

Green Zone: Fit

All markers within healthy ranges, indicating good overall health status with maintenance focus

Integrating Diagnostic Results

When diagnostic tests are completed, results are seamlessly incorporated into the health score algorithm, producing an updated, more accurate assessment.

01

Results Import

Lab data flows directly into the app system

02

Score Recalculation

Algorithm processes new diagnostic parameters

03

Updated Assessment

User receives refreshed health score with clinical insights

04

Service Matching

System identifies appropriate care services based on findings
